FLOTTOCARB®

ACTIVE CARBON SPECIFICALLY FOR FLOTATION

COMPOSITION

Extremely pure vegetable carbon.

CHARACTERISTICS

FLOTTOCARB is a vegetable carbon activated with phosphoric acid whose particles possess the ideal chemical-physical structure and characteristics for use in clarification processes by flotation.

Thanks its characteristics, FLOTTOCARB adheres easily to the flotation gas.

The advanced production and purification technology create a product with a reduced heavy metal content.

FLOTTOCARB possesses a strong decolorizing power and does not modify the organoleptic characteristics of the product treated.

Its adsorbent action is particularly effective towards anthocyanins and oligomers that are susceptible to oxidation (the cause of instability in white wines).

USES

FLOTTOCARB is indicated in clarifying treatments by flotation of musts and fruit juices. For a correct use during flotation, it is recommended to carry out a laboratory test to determine the ideal dosage.

FLOTTOCARB is used for its decolorizing and stabilizing qualities which are improved by the effect of the flotation technique.

When using FLOTTOCARB, comply with the relative legal regulations in force.

DIRECTIONS FOR USE

Disperse FLOTTOCARB in water or directly in the product to be treated; stir continuously to ensure the product is mixed in evenly.

Leave in contact for at least two hours before the flotation clarification process.

DOSAGE

Up to 100 g/hL.

WARNING: the legal limit is 100 g/hL of dry carbon.

PACK SIZES

10 kg bags.

CONSERVATION

Keep in a cool, dry place. Close open packs securely.

DANGER CLASSIFICATION

Based on the Ministerial Decree of 28/01/1992, the compound is classified: not dangerous.
